

[問 1]

$$(1) h \tan \alpha \quad (2) \frac{mv^2 \cos \alpha}{h \sin^2 \alpha} \quad (3) mg - \frac{mv^2}{h \tan^2 \alpha} \quad (4) \sqrt{gh} \tan \alpha$$

$$(5) mg \cos \beta - \frac{m}{\tan \alpha} \left(\frac{v_0^2}{h \tan \alpha} + g \sin \beta \right)$$

$$(6) v_0 \leq \sqrt{gh(\tan^2 \alpha \cos \beta - \tan \alpha \sin \beta)}$$

$$(7) \sqrt{v_0^2 - 4gh \tan \alpha \sin \beta}$$

$$(8) \frac{m}{\sin \alpha} \left(\frac{v_0^2}{h \tan \alpha} - 5g \sin \beta \right)$$

$$(9) m \left(g \cos \beta + \frac{5g \sin \beta}{\tan \alpha} - \frac{v_0^2}{h \tan^2 \alpha} \right)$$

$$(10) \sqrt{5gh \tan \alpha \sin \beta} \leq v_0 \leq \sqrt{gh(\tan^2 \alpha \cos \beta - \tan \alpha \sin \beta)}$$

$$(11) \tan \beta \leq \frac{\tan \alpha}{6}$$

[問 2]

$$(1) \quad \textcircled{1} \quad \frac{V}{l} \quad \textcircled{2} \quad b \quad \textcircled{3} \quad \frac{eV}{l} \quad \textcircled{4} \quad a \quad \textcircled{5} \quad b \quad \textcircled{6} \quad \frac{eV}{kl} \quad \textcircled{7} \quad \frac{enSV}{kl} \quad \textcircled{8} \quad \frac{e^2 nSV}{kl}$$

$$\textcircled{9} \quad \frac{kl}{e^2 nS} \quad \textcircled{10} \quad l \quad \textcircled{11} \quad S \quad \textcircled{12} \quad \frac{k}{e^2 n} \quad \textcircled{13} \quad (\text{電気}) \text{ 抵抗率} \quad \textcircled{14} \quad \Omega \cdot \text{m}$$

(2) ① 温度を上げると、熱により固体中を自由に移動できる電子などが生じ、電気をよく通すようになるから。

② B、Al、Ga、In など

③ P、As、Sb など

[問 3]

$$(1) aT \quad (2) T \frac{a^\gamma}{b^{\gamma-1}} \quad (3) Tb^{1-\gamma} \quad (4) C_p T(a-1) \quad (5) C_v T \frac{a^\gamma - 1}{b^{\gamma-1}} \quad (6) 1 - \frac{a^\gamma - 1}{\gamma b^{\gamma-1}(a-1)}$$

[問 4]

(1) 左図

(2) $\sqrt{a^2 - \left(a - \frac{c}{n_0} \Delta t\right)^2}$ (3) $\frac{c}{n_1} \Delta t$

(4) $a \frac{n_1}{n_1 - n_0}$ (5) $a \left\{ 1 + \frac{n_0^2}{n_1(n_1 - n_0)} \right\}$

(6) $\frac{1 + \sqrt{5}}{2}$ (または 1.6)

[問 5]

(1) $2m_p - m_e - \frac{Q_1}{c^2}$ [kg] (2) ${}^3_2\text{He}$ (3) $2(Q_1 + Q_2) + Q_3$ [J]

(4) $\frac{Q_4}{4m_p}$ [J/kg] (5) $\frac{4Q_0}{Q_4} m_p$ [kg] (6) 1×10^{11} 年
